

▼ Experiment 6

AIM

Write a Python program to convert a list of characters into a string.

Description

Functions used:

join(): The *join()* method takes all items in an iterable and joins them into one string.

SYNTAX:

`string.join(iterable)`

EXAMPLE:

```
List = ['Experiment',6] Separator = "_"
```

```
x = Separator.join(List)
```

```
print(x)
```

OUTPUT

Experiment_6

▼ Program

```
#Define a list of characters
lst1=['H','e','l','l','o','.','.','P','y','t','h','o','.n']

#Convert the list to string
str=".".join(lst1)
print(str)

Hello Python
```

▼ Conclusion

Hence we made Python program to convert a list of characters into a string
